Art Unit: 2137

DETAILED ACTION

1. Claims 1-17 have been examined.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: The specification on page 12 paragraph 56 refers to Fig.1 by discussing standardized version 31, detector 50, arrow 44 and arrow 46, however, Fig. 1 does not include standardized version 31, detector 50, arrow 44 and arrow 46. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Application/Control Number: 10/629,292 Page 3

Art Unit: 2137

4. Claims 1-17 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-17 recite "a computer program" It is not tangibly embodied as it is only software per se. The claims should be amended to specify that "a computer program stored on a computer readable storage medium".

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

6. Claims 1-3 and 6-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Nachenberg U.S. Patent Number 6,357,008.

Nachenberg teaches a computer program for identifying malicious portions in a suspect computer program comprising:

a preprocessor portion for receiving the suspect computer program and creating a logically equivalent standardized version of the suspect program; (col. 5, lines 27-39; col. 6, line 53-col. 7, line 22)

a library of standardized malicious code portions; (col. 7, line 23-col. 8, line 31; col. 9, lines 26-65) and

a detector portion reviewing the standardized version against the library of malicious code portions to provide an output indicating when a malicious code portion is

Art Unit: 2137

present in the suspect program. (col. 9, line 66-col. 10, line 10; col. 15, line 38-col. Col. 16, line 63)

As per claim 2:

Nachenberg further teaches wherein the standardized version identifies the execution order of instructions of the suspect program and wherein the detector portion reviews the instructions of the standardized version according to the execution order. (col. 2, line 38-col. 4, line 65; col. 7, line 23-col. 8, line 31; col. 9, line 26- col. 10, line 10; col. 15, line 38-col. Col. 16, line 63)

As per claim 3:

Nachenberg further teaches wherein the preprocessor identifies the execution order of the instructions by generation of a control-flow listing of the instructions. (col. 2, line 38-col. 4, line 65; col. 9, lines 26-67)

As per claim 6:

Nachenberg further teaches wherein the standardized version removes irrelevant portions of the suspect program. (col. 13, line 42-col. 15, line 37)

As per claim 7:

Nachenberg further teaches wherein the preprocessor removes irrelevant portions by identifying irrelevant portions to the detector so that the detector ignores identified irrelevant portions when reviewing the standardized version. (col. 13, line 42-col. 15, line 37)

As per claim 8:

Art Unit: 2137

Nachenberg further teaches wherein the irrelevant portions are one or more nop instructions. (col. 13, line 42-col. 15, line 37)

As per claim 9:

Nachenberg further teaches wherein the standardized version uses uninterpreted variables. (col. 13, line 42-col. 15, line 37)

As per claim 10:

Nachenberg further teaches wherein the suspect program is a binary executable and wherein the preprocessor receives the binary executable to generate a listing of instructions and data values. (col. 13, line 42-col. 15, line 37)

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 4-5 and 11-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nachenberg U.S. Patent Number 6,357,008 in view of Ho et al. (hereinafter Ho) U.S. Patent Number 7,188,369.

As per claims 4 and 14:

Nachenberg teaches all the subject mater as discussed above. Nachenberg does not explicitly disclose wherein the standardized version maps instructions of the suspect program to corresponding standard synonym instructions. Ho in analogous art,

Application/Control Number: 10/629,292

Art Unit: 2137

however, discloses wherein the standardized version maps instructions of the suspect program to corresponding standard synonym instructions. (col. 5, lines 25-col. 6, line 40) Therefore it would have been obvious to one ordinary skill in the art at the time the invention was made to modify the method disclosed by Nachenberg with Ho in order to receive external instructions and for execution and perform their respective antivirus functionalities. (col. 6, lines 18-21; Ho)

As per claims 5 and 15:

The combination of Nachenberg and Ho teaches all the subject matter as discussed above. In addition, Ho further teaches wherein the standard synonym instructions are different in number from the instructions of the suspect program to which the synonym instructions map. (col. 5, lines 25-col. 6, line 40)

As per claims 11 and 16:

Nachenberg teaches all the subject mater as discussed above. Nachenberg does not explicitly disclose including a library of patterns matching to one or more instructions of the suspect program and wherein the preprocessor creates the standardized version by replacing instructions of the suspect program with matching ones of the library of patterns and wherein the library of standardized malicious code portions are also collections of ones of the library of patterns. (col. 5, lines 25-col. 6, line 40) Therefore it would have been obvious to one ordinary skill in the art at the time the invention was made to modify the method disclosed by Nachenberg with Ho in order to receive external instructions and for execution and perform their respective antivirus functionalities. (col. 6, lines 18-21; Ho)

Application/Control Number: 10/629,292

Art Unit: 2137

As per claims 12 and 17:

The combination of Nachenberg and Ho teaches all the subject matter as discussed above. In addition, Ho further teaches wherein a pattern is at least one instruction logically replacing at least one different instruction in the suspect program. (col. 5, lines 25-col. 6, line 40)

As per-claim 13:

The combination of Nachenberg and Ho teaches all the subject matter as discussed above. In addition, Ho further teaches wherein a pattern in a tag replacing at least one instruction logically having no substantive effect on the execution of the suspect program; a library of patterns is implemented as a look-up table matching instructions to the patterns. (col. 5, lines 25-col. 6, line 40)

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shewaye Gelagay whose telephone number is 571-272-4219. The examiner can normally be reached on 8:00 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on 571-272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
